

Abstract

5 A radio apparatus (1), in particular a radio telephone,
that serves to guide the user is proposed. The radio apparatus
(1) includes a display device (5). In addition, at least one
control element (11, ..., 16) is provided for selecting and/or
activating functions of the radio apparatus (1) that can be
displayed on the display device (5). The at least one control
10 element (11, ..., 16) is disposed in the preferably immediate
vicinity of the display device (5), so that a local association
exists between the at least one control element (11, ..., 16) and
the display of the functions of the radio apparatus (1) on the
display device (5).
